

Supported metal alkyl compound and its preparation**Abstract**

5 Pulverulent solid which consists essentially of at least one metal alkyl compound bound
chemically and/or physically to a finely divided, porous, mechanically stable and chemically inert
support, has a proportion by weight of metal alkyl compound of at least 5% by weight, based on
the support, and has an angle of repose, determined in accordance with ISO 4324, of up to 48°.
The solid allows trouble-free metering as active component into a reactor.
